- Deployment

Project 3: Weather Application – Kotlin

Type: Development with Maintenance

Software: Android Studio

In this project I created a Android weather app, which uses an API from openweathermap to get weather information all over the world. By default it displays the local weather . You can use locate button to get weather data at your location. You can also use search to find the current weather at a city, The app displays local temperature, gives you a brief description and also shows an icon based on the weather.

Responsibilities:

- Design and Analysis

- Coding and Testing

- Deployment
